**THE SITUATION**

A large pulp processing and papermaking site in the North West of England was experiencing numerous operational challenges with their production line.

Several of these issues related to the ongoing maintenance of gearboxes and couplings on site, many of which were coming to the end of their service life or were failing prematurely.

**THE SOLUTION**

The team at the local HAYLEY DEXIS branch in Carlisle received the call for assistance and contacted fellow DEXIS EUROPE member, LAMOND & MURRAY DEXIS to join them in visiting the customers' facility. As a specialist gear and gearbox manufacturer and service provider for 100 years, Lamond & Murray were well-placed to offer expert technical advice.

A particular 1.5 tonne David Brown gearbox was identified during the complimentary site survey, and it was

delivered to LAMOND & MURRAY DEXIS for a complete overhaul. A full report was generated during the strip and inspection process, and the refurbishment was completed with a quick turnaround.

**THE RESULT**

The customer was thrilled with the work conducted, and the timescales in which the project was completed. The working relationship between the customer, their local HAYLEY DEXIS team and LAMOND & MURRAY DEXIS has been strengthened by the success of the project, with the

**“THE REFURBISHED  
GEARBOX NOW RUNS  
SIGNIFICANTLY MORE  
EFFICIENTLY AND  
RELIABLY.**

**”**

refurbished gearbox now running more efficiently and reliably. As a result, further collaborative projects have been scheduled in the near future.

The high prices of spares and new equipment quoted by OEMs have been negated by the services provided by both HAYLEY DEXIS and LAMOND & MURRAY DEXIS, saving the customer time and money in the maintenance of their production line.

**KEY RESULTS**

Spend reduced in opting to refurbish rather than purchase a new gearbox.

Reliability of unit improved.

Efficiency of gearbox improved.

High OEM prices and lead times avoided.
